

GURKIRAT SINGH

Software Engineer - II

Gurgaon, India | +91 8729 003 898 | gurkiratsinghofficial@gmail.com | linkedin.com/in/gurkiratsinghofficial

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience building scalable, high-performance web applications across SaaS, e-commerce, and global platforms. Experienced across the full stack, combining strong frontend engineering with hands-on backend development, APIs, microservices, and data-driven systems. Passionate about crafting polished, intuitive digital experiences backed by clean, maintainable architecture.

CORE SKILLS & TECHNOLOGIES

Frontend: React, Next.js, JavaScript (ES6+), HTML5, CSS3, SCSS, Tailwind CSS, Storybook

Architecture: Micro Frontends, Module Federation, Design Systems, Component Architecture

Backend & APIs: Node.js, Express.js, REST APIs, WebSockets, Webhooks, Server-Sent Events

Databases: MongoDB, MySQL

Version Control: Git, GitHub, GitLab

Build & Developer Tools: Webpack, Babel, npm, yarn, ESLint, Husky

Other Tools: Jira, Cursor, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer - II | Klearnow.Ai

April 2022–Sept 2026

Software Engineer - I | Klearnow.Ai

Gurgaon, Haryana

- Architected and drove adoption of **Webpack Module Federation**-based microfrontends across the growing User Management, Broker Platform, and Operations Panel teams, enabling independent development and deployment while cutting the end-to-end release cycle by **50% (4 weeks → 2 weeks)**.
- Bootstrapped the **KlearEngine SaaS frontend architecture**, selecting the technology stack and establishing the code-base foundation; built a custom **JWT-based authentication module** and backend-config-driven routing using React Router v6, creating a scalable foundation for **50+ routes/screens**.
- Optimized **Create React App (CRA) / Webpack 4** production builds with CRACO, cutting warm build times by **~80% (~6 min → ~1 min)** through Babel, Terser caching, source map, ESLint, and `node_modules` transpilation optimizations, improving CI/CD feedback without changing runtime behavior.
- Eliminated custom text-insertion logic from **50+ input components** by building a zero-integration **OCR picker** that programmatically triggers native `onChange` events, allowing existing validation and API-call handlers to work without code changes. [text-picker-ui.onrender.com](#)
- Contributed to the development and standardization of a reusable **design system and component library**, helping build **30+ shared components** adopted across **3 products**, improving UI consistency and component reuse across frontend applications.
- Automated a **shipment-assignment module** that assigned shipments to operators based on predefined priority logic, eliminating manual assignment steps and improving shipment filing efficiency by **20%**.
- Proposed and advocated for **normalized JSON response structures** across **10+ APIs**, enabling direct entity lookup and mutation instead of repeated array traversal and reducing duplicated frontend data-transformation logic across API-driven workflows.

Associate Software Engineer | VT Netzwelt

Oct 2020– April 2022

Associate Trainee - Fullstack | VT Netzwelt

Mohali, Punjab

Client: **ARTMO**

- Built and maintained the **Next.js frontend**, building reusable UI components, responsive interfaces, and REST API integrations; contributed to **4+ Node.js/Express.js microservices** using **TypeScript and MongoDB** to implement backend business logic, data management, and cross-service workflows.
- Automated **Node.js-based migration scripts** to migrate **100K+ user records from Magento to MongoDB**, implementing data transformation and validation workflows while preserving critical **artwork/image metadata, asset mappings, and user relationships** to maintain data integrity.
- Built an **automated media processing pipeline** that generated multiple resolution and aspect-ratio variants for uploaded images, integrating **CDN-based delivery** to serve display-appropriate assets and improve image-loading performance by **~20%**.

- Implemented a scalable **41-language i18n framework across 11+ pages**, centralizing translation logic and enabling consistent localized experiences through a single frontend codebase.
- Built a **real-time messaging module using Socket.IO** across frontend and backend, enabling bi-directional communication and real-time message delivery between users.
- Built a scalable **notification management system** supporting **10+ default notification types** and a **WYSIWYG-based content editor**, enabling configurable rich-content notifications with context-aware navigation and deep linking to relevant platform pages and entities.
- Implemented **role-based access control (RBAC)** across the platform, supporting **5 distinct roles – Super Admin, Admin, Artist, Seller, and User** – with granular permissions governing access to platform, marketplace, and content-management workflows.
- Supported the successful **go-live and platform transition**, contributing to the onboarding of **10K+ new users within the first month** while maintaining a scalable and responsive user experience.
- Implemented **cron-based batch processing for bulk email notifications**, scheduling outbound email workloads in controlled batches to comply with **AWS email-sending limits** and maintain reliable notification delivery during high-volume campaigns.

EDUCATION

Bachelor of Engineering - Computer Science

CGPA: 8.83/10.0

Chitkara University

AWARDS & RECOGNITION

- Rising Star 2022 Award
 - Spot Award
- Klearnow.Ai (2022)
- VT Netzwelt (2021)
